### Sculpted Gel Nails

Gel nails were sculpted using clear forms.

The nails were prepped and then bond was used.

First the clear build gel was applied to the body of the nails, nails were cured for 2 minutes.

Next the forms were put on and then I used the extra white sculpt gel to build the free edge to give the nails a French manicure look. Nails were cured for 2 minutes. Second layer of extra white sculpt gel was applied and then cured for 2 minutes. Removed the dispersion film.

Nails were filed using an electric file and also hand filed to shape. Gel sealant was applied and cured for 2 minutes and removed the dispersion film. Cuticle oil was rubbed into cuticles. Red polish was used to polish two nails.
