

Pink and White Sculptured Nails

Veteran

I first had to soak off my models existing set of nails.

I performed a mini manicure on my model preparing her nails for the acrylics.

- 1.) 180 grit file to remove shine
- 2.) dusted each nail
- 3.) dehydrated and primed all 10 nails
- 4.) applied forms (one at a time)
- 5.) applied white acrylic to form free edge, then applied pink acrylic to nail bed area
- 6.) removed form and molded c-curve
- 7.) repeat on remaining 9 nails
- 8.) used both 180 grit and 150 grit files to refine the shape of the nails
- 9.) used sponge buffers to remove scratches from nails
- 10.) used shiner to add shine to nails
- 11.) took photos of presentation shot, down the barrel, and side views using a Sony Cybershot camera
- 12.) polished two nails red
- 13.) took close up photo
