L&P pink and white sculpted nails

First I performed the prep which includes;

- sanitizing hands and nails
- softening and pushing back cuticles
- rinsing and drying nails
- shaping nails using a 180grit file
- buffing each nail plate using a 240grit buffer
- applying nailfresh to dehydrate the nail surface

I started the l&p application by creating moons on all nails using soft white powder, then I applied nail forms to all nails and sculpted nail by nail. Using white powder I extended the nail to the desired length and created a smile line, then I applied pink powder to create a natural C curve and a thin cuticle area. Finally I pinched the nail.

I shaped the nails using a 180 grit file, then buffed them to high shine using a 240/220grit buffer. I cleaned the nails with water and massaged cuticle oil into them, and then I removed excess oil from the nail plate.

I finished by applying two coats of red polish on two nails.
